

Abstract of the Disclosure

A cable tie having stepped down strap body teeth is disclosed. The cable tie includes a strap body having a first end and a second end opposite the first end, a locking head secured to the first end of the strap body, and a plurality of walls on the locking head forming a strap body accepting channel. The strap body includes a first group of teeth having a first predetermined depth and a second group of teeth having a second predetermined depth. The first depth is greater than the second depth. A method of making a cable tie is also disclosed.
